Market Summary

- The Naira has experienced a period of slight volatility, ending the period with a 0.31% depreciation compared to the start of the week. The most significant move occurred between April 22nd and April 23rd, where the rate jumped by approximately ₦5.46. This suggests a sudden increase in demand or a tightening of liquidity at the close of the window. The mean exchange rate for this period sits at 1,350.69.
- Africa's population is set to rise by nearly 1 billion people by 2050. This is projected to more than double energy demand, making expanded energy access essential for economic growth and improved living standards. <https://tinyurl.com/mr2pd83k>

- Existing infrastructure deficits, combined with increased demand, mean accelerating energy infrastructure investment must be a strategic priority for governments across the continent. <https://tinyurl.com/mr2pd83k>
- Closing the gap will require deeper capital markets, stronger alignment between governments and the private sector, and a larger pipeline of bankable projects to avoid entrenched energy poverty. Continue reading full version on the S&P Global website: <https://tinyurl.com/mr2pd83k>
